Deltatech Srl

We design together with you

Key Competencies

Structure Analysis

strain gauge, load cell, load cells, torque meter, force transducers, torque transducer, instrumented bolts, strain gage for stress measurement on bolts, strain gauges, made-to-order, multi-axis sensor, force sensor, calibration, strain gage, indicator, signal conditioner, instrument, instrumentation, custom load cell

Contact: Ivan Fondriest

Our Story

Deltatech was founded in 1992. Staff members have many years of professional experience in the field of strain gauge applications.

What We Do

Load measurements on suspensions, torque measurements on shafts, strain gages application for structure analysis on metal and composite material.

Custom-made products

The readiness to design force sensors and torque sensors, which meet the specific requirements of the customer, enables the production of low cost versions as well as sophisticated solutions with an elevated standard of quality and reliability. The operative sector includes the strain gages applications for structure analysis.
