# HURRICANE SPLINE

From **PAOLI'S EXPERIENCE** and its cutting edge sectorial engineering research a new wheel gun is born: the **SPLINE DRIVE HURRICANE**. The work in R&D of the Paoli highly skilled technicians and the partnership with the most recognized racing teams has allowed the development of an innovative and greatly performing product.

A spline drive wheel gun differs from a square drive tool mainly in the teeth that connect the anvil with the socket.

Spline drive wheel guns, because of the increased contact points between the anvil and the socket, offer a better torque transmission and a reduced load on each contact point.

This means the following **ADVANTAGES**: more power; more strenght; more endurance.

Paoli supplies spline sockets to be used with **HURRICANE SPLINE**.

# JAN LARSEN ART

ARTIST: JAN LARSEN  
BORN: 1967  
NATIONALITY: USA  
STYLE: NEO-POP

Talked about as one of the most interesting, thoughtful, entertaining, and important artists at work in contemporary art today, **Danish-American Neo-Pop celebrity artist Jan Larsen** credits his collectors, clients, patrons, mentors, and contemporaries with inspiring him to new heights in his work, as his career progresses seemingly into the art-historical firmament.

After starting his fine-art-and-production business **Jan Larsen Art** in the apartment he took over from Brian Donnelly (also known as **KAWS**, now one of the world's most-successful artists) in 2000 as a means of learning the fine art trade prior to joining it as an artist himself, Larsen built the enterprise and brought it to trade globally, founding and running **four contemporary art galleries** in New York City from 2000 to 2015, **producing hundreds of exhibitions**, and representing **over 50 artists and hundreds of clients**, on primary markets and at auction, with accounts at the **Christie's**, **Sotheby's**, and **Phillips** auction houses.

Having thoroughly researched the markets for fine art in terms of content and mechanics of the trade while reflecting on what he wanted to say with his work during those 15 years, Larsen finally **launched his career with a solo show in 2015** in partnership with a retail gallery in Manhattan's Chelsea neighborhood, and has mounted show after show since, 10 solo shows in the first 4 years, each well-received and selling well in New York, London, and Singapore.

From his **popular-culture-based reflections** to his abstract digital prints, his 'word-work' meditations, his Dada-esque conceptual sculptures and performances, to his abstract-expressionist paintings in the traditions of Jackson Pollock and Japan's Gutai Group, Larsen's powerful range demonstrates a mastery of **art-as-social-commentary** in a wide array of contexts and formats, commenting precisely, presciently, and powerfully on the times we live in.

Thanks to the work of the artist **Jan Larsen, Paoli Hurricane** becomes an art masterpiece.

Dedicated to the high-octane world of motorsport's elite races, **HIGH TEST** is a limited edition contemporary sculpture.

Precious and suggestive, **HIGH TEST** is inspired by Paoli wheel guns, by Pit Stop world and by the value that good teamwork holds for everyone, not only on the pitlane.

The new Paoli wheel nut sockets

# PAOLI SOCKETS

The new Paoli sockets are an unprecedented product and the result of a long and complex engineering research. Continued consultation with many race customers has ensured that the Paoli Sockets' technological development goes hand in hand with the real needs of racing teams in terms of versatility, safety, materials and maintenance.

- Three different materials: titanium, special steel and aeronautical aluminium. The first and the second are suitable for the race application, the third one is suitable for non-intensive use and torque wrench.
- Innovative design, attractive shapes and aesthetically pleasing.
- Accuracy in fitting the socket to the square drive, perfect clearance that allows the socket to be assembled and disassembled just by hand.
- Innovative safety system to insert the pin through the socket/square drive hole. Revolutionary system when assembling the socket by using the circlip and an 'O' ring on the cover. Maximum safety, a fine fitting and a considerably reduced assembly time.
- Insertion of service holes for maintenance of magnets: replacing magnets is quick and easy, with a simple plug-locator.
- Internal 'O' ring retaining nut made from new Paoli Sockets material. The customized resin gives the socket an ideal grip with its high gripping power.
- The Paoli Sockets Service Kit for the maintenance and replacement of worn parts contains everything needed to work on the socket simply and safely. A brief instruction manual indicates the optimum way to carry out operations (E.g. replacement and subsequent refinement of magnets).

Internal 'O' ring retaining nut especially made for Paoli Sockets.

Also available in aeronautical aluminium, suitable for torque wrench applications.

Innovative safety system.

Replacing magnets is quick and easy thanks to rear service holes.

Accuracy in fitting the socket to the wrench (minimal clearance).

Innovative design, attractive shapes and aesthetically pleasing.

An additional device for the "Pit Stop complete" button is available. The Pit Stop complete device support is suitable for the APEM 13000X778 button and Deutsch ASDD006-09PN connector.

# PAOLI REGULATORS

## AIR PRESSURE REGULATORS

Main features: Paoli regulators have all been conceived to first guarantee the correct (very high) air flow to all the models of Paoli guns. Furthermore, all the Paoli regulators minimize the pressure drop from static to dynamic. We do deliver mostly piston regulators for high pressure and diaphragm regulators for lower pressures.

- All of our regs are entirely made of brass
- We can deliver different kind of gauges (standard, filled w/vaseline to stabilize the needle, w/double main scale psi/bar)
- We do always recommend to match a high pressure oiler to each regulator and to ship them back regularly to us or to an authorized service centre for a complete overhaul.

## F4 FEATURES

- The “Paoli F4” air pressure regulator is the best seller model. It keeps high performances also when the bottle is almost empty. Max air flow superior to any other air pressure regulator!
- It grants constant air flow also at high pressures.
- It keeps high performances also when the air bottle is half empty.
- It gives very high air flow

Operating and

## AIR PRESSURE REGULATOR SERVICE FIXTURE

S.01.0161

The air pressure regulator service fixture sustains the regulator during its assembling and disassembling phases.  
It is compatible with the following Paoli air pressure regulator models: F1, F2, F4, F9 and F50.

## AIR PRESSURE REGULATOR TESTING BENCH

This kit has been designed to test the air pressure regulators. The air pressure regulator testing bench is composed by:

- 1 bench (350 x 130 x 80 mm)
- 1 hose
- 1 valve

DIN 200 Bar coupling for compressor available on demand (Code: B.21.0088)

## SPARE GUN AIR SUPPLY DEVICE

This device allows the operator to get a second spare gun connected to the same air supply. It is needed in case of EMERGENCY (first gun failing) during the pit stop operations.

**WARNING:** you should use just on gun at a time otherwise the air flow drops down very quickly.

Couplings not included.

## ELECTRONIC PRESSURE SWITCH

Electronic pressure switch mountable on all Paoli pressure regulators.

The acoustic alarm, audible at a distance, alerts the user when the cylinder is emptying. This limits the risk of running out of air and reduces the possibility of compromising the wheel gun performance in case of semi-empty air bottles.

### FEATURES

- Easily readable digital display
- Intuitive and fast setup
- Settable Pressure
- Easy and flexible mounting
- Acoustic alarm
- Power adapter included

CODE	B.40.0090

DECIBEL	100 dB
PIN CONNECTION	Pin 1: 9-36V DC Pin 2: GND

## DIGITAL GAUGES

**BACKLIGHTING:**  
the display can be easily read, even under poor lighting conditions.

**ROTATABILITY OF THE DISPLAY:**  
The display can be rotated through 300°, thus it can be read from almost any position. Therefore the gauge can also be used in situations where mounting is difficult.

### PRECISE AND QUICK READING OF THE DISPLAY

The robust stainless steel case and the battery power enable a flexible operation of the digital gauge. For a precise and quick on-site reading of a pressure value, a digital indicator is the ideal solution. The bargraph display and drag pointer function integrated into the display, as well as retrievable Min/Max peak values, enable effective analysis of the measuring point.

Thanks to the rotatable display, the digital pressure gauge can be easily adapted to difficult conditions. The backlighting also provides easy readability of the display in poor lighting conditions.

### FEATURES

- Battery operation (2 x 1.5 V AA cell)
- Min/Max memory function
- Unit switching: bar, psi, MPa
- Accuracy 0.5 % ± 1 digit

## MOTORSPORTS DATA WIRING

Motorsports Wiring with Race-Spec is very similar to military and aerospace specification.

It evolved from aircraft and military specifications wherein light weight and reliability are paramount. As motorsports evolved into an increasingly more sophisticated and expensive professional endeavor, specific motorsport connectors have evolved which are even lighter and smaller than their aerospace counterparts.

Harnesses are built using Spec55 wires insulated with modified radiation cross-linked ETFE polymer. It has a temperature rating of -65°C to 200°C [-85°F to 392°F] continuous using a silver plated copper conductor, and combines the easy handling of a flexible wire with excellent scrape abrasion and cut-through characteristics.

Harness are protected with System 25 hat shrinking sleeves and boots. DR-25 heat-shrinkable tubing is flexible and abrasion resistant. It is made from a radiation cross-linked elastomeric material specially formulated for optimum high temperature fluid resistance, and long term heat resistance. The operating temperature of DR-25 tubing is from -75°C to +150°C for long periods.

Connectors used, are specifically projected for motorsport application. They offer weight and space saving over standard military designs and is available a wide variety of options, with medium and high density arrangements.

Between connectors and sleeve are applied heat-shrinkable molded specifically formulated and designed to provide optimum high-temperature fluid resistance and longterm heat resistance. They are particularly suitable for sealing and strain relief at connector-cable terminations and cable-to-cable transitions on military vehicle cables and harnesses. Operating temperature are from -75°C to 150°C [-103°F to 302°F] for long periods.

# PAOLI SERVICE

To ensure the reliability, accuracy, power and speed of our product, we recommend a complete overhaul. Our After Sale Service can provide information about after how many cycles (No. 1 cycle = No. 1 LOOSENING + No. 1 TIGHTENING) the service is required.

You can also require the repainting of the tool to get it back to the aesthetic (and functional) conditions similar to a new wheel gun. The service Test carries out laboratory testing on individual components subject to greater effort. It is possible also to convert the directionality (for each wheel gun model), transforming it to its different versions (UH, RH, LH).

- **S - SERVICE AND REPAIR:**  
the wheel gun is fully overhauled, cleaned, all consumable components replaced and finally tested
- **R - SERVICE, REPAIR AND REPAINT:**  
in addition to the service S, the wheel gun is repainted
- **T - SERVICE, REPAIR, AND TEST REPAINT:**  
in addition to service R, the wheel gun is subjected to various tests that certify the conformity of the components
- **C - SERVICE, REPAIR, REPAINT AND CONVERSION:**  
in addition to service R, the wheel gun is transformed to its different versions (UH, RH, LH).

# ENGINEERING

## ENGINEERING SERVICE

Since 1968 we have been manufacturing wheel guns, and we would now like to get our professionalism and experience available to our customers to an even greater extent.

We have heavily invested in research and development in order to get procedures and instruments suitable for the study and creation of products most suited to the growing needs of the automotive industry.

Dino Paoli is in fact now able to offer to customers an Engineering service which consists in the development of variations of wheel guns components customized according to different needs.

The engineering offer covers several areas: performances, durability, ergonomics, lightness.

To obtain these results we use and work on materials from the aviation and military industry, such as special steels, carbon fibre, aluminium and magnesium alloy, titanium.

The design of the new components is tested using finite element analysis (FEM) and once designed (CAD) these are produced using CAM, which allows us to easily obtain even geometrically complex parts.

Lately we have introduced the CFD air flow analysis to further optimize our wheel guns performances.

We also have a range of suppliers very skilled in heat treatments, who are capable to accurately identify the expected mechanical features.

# FAQ

## FREQUENTLY ASKED QUESTIONS

### Why do we have LH, RH, UH wheel guns?

RH and LH give more power on the loosening mode (where it is mostly required), UH delivers the same power on both directions.

### What is the difference between a 70/30 wheel gun and a 60/40 wheel gun?

70/30 means that 70% of the power is on the loosening mode; 60/40 means that 60% of the power is on loosening mode.

### Which feature have I to keep in mind to chose a hose in order to get the best performance?

The most important feature is the inner diameter of the hose in order to guarantee the correct air flow to the gun.

### What is the difference between a 2-port and a 3-port back cover?

The ports are the holes in the shuttle (they can be 2 or 3). This definition refers to the shuttle motion. The 2-port is normally for right handed operators, the 3-port is normally for the left-handed operators.

### What BIAS means and what is its purpose?

BIAS means that the gun is both RH and LH and you can convert it from one version to the other just moving a lever on top of the gun.

### What is the difference between static and dynamic pressure?

The static pressure is the pressure you read on the OUT gauge of the regulator when the gun is not working; on the other hand, the dynamic pressure is the pressure you read on the OUT gauge of the regulator when the gun is working (the dynamic pressure is always lower than the static pressure).

### Why would I need a Fast Shuttle on my wheel gun?

To be faster at changing the gun direction (from loosening mode to tightening mode just pushing a lever with the thumb or just slightly moving the wrist on the Fast Shuttle 2.0 release.

### What is the fluorescent magnetoscopic inspection?

The method, designed for the inspection of small parts, consists of a component immersion in a detecting fluid. Through the magnetization the fluorescent particles are attracted and finally a UV lamp reveals defects and non-compliances.
